

# SOCOM-X™

SPECIAL OPERATIONS COMMUNICATIONS XTREME

- SHOOT
- COMMUNICATE
- MOVE

SOCOM-X™ is a state-of-the-art tactical communications and hearing system designed for use in the most extreme mission critical environments and conditions. SOCOM-X™ gives the modern warfighter the ability to both receive and transmit clear communication in the worst battlefield conditions.

## SOCOM-X™ FEATURES

- Intuitive design allows ease of use
- Superior hearing protection
- Sound localization and amplification for reconnaissance
- Improved speech intelligibility both receiving and transmitting in extreme noise
- Allows use of multiple radios, usb laptop audio, stereo audio, and intercom
- Use with custom or non-custom ear plugs and optional add-on earcup
- Designed to meet or exceed MIL-STD-810 and MIL-STD-461E standards
- Enhanced situation awareness

## SOCOM-X™ CONTROL MODULE

- Fully ruggedized and made of aircraft billet aluminum with matte black finish
- Uses two COTS CR123 batteries to power the system for over 100 hours
- Can be attached to clothing or vests using the attached MOLLE strap
- Controls up to three radios or two radios and a laptop or intercom simultaneously
- Reliable performance with a multitude of radios and intercom systems
- Designed to maximize forward compatibility with future radios and equipment
- Ergonomic design ensures ease of use for long periods of time

## SOCOM-X™ HS2 HEADSET

- Fully ruggedized and made of aircraft billet aluminum with matte black finish
- Utilizes SPEAR Labs HEARS (Hearing Enhancement Amplitude Reduction System)
- Enhanced ECM boom microphone ensures reliable communications performance
- Ergonomic design allows extended use without discomfort
- Fully reversible without reconfiguring for left or right hand shooter
- Allows communications for tactical whisper speech or during gunfire

Clear communication is the primary measure used to increase situation awareness in any environment. SOCOM-X™ provides fire support coordinators, and/or forward observers and forward air controllers with the ability to transmit and receive decisive communication without the risk of misinterpretation and/or giving away their concealed location.
